Restaurant *Mobile*

Your restaurant available to the mobile world!

Use this app to capitalize on this digital medium to reach customers and improve your bottom line.

With Restaurant Mobile You Can:

- ▶ Display Your Menu
- ▶ Show your Offers and Specials
- ▶ Give your location and directions to users.
- ▶ Connect to Facebook and Twitter
- ▶ Accept mobile and delivery orders.
- ▶ Take Reservations
- ▶ Send Push Notifications, Alerts, and Announcements.

A Quick Tour

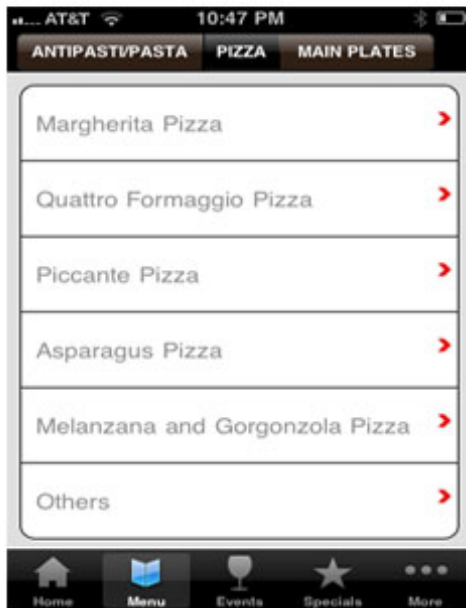

Restaurant Mobile is a “sticky” and effective method of getting new customers and growing repeat customers. We customize your own branded iPhone & Android App. With Restaurant Mobile, you will attract customers to your restaurant before they decide to eat elsewhere. Send out alerts and announcements to all the customers walking around with your mobile app in their pocket.

Home

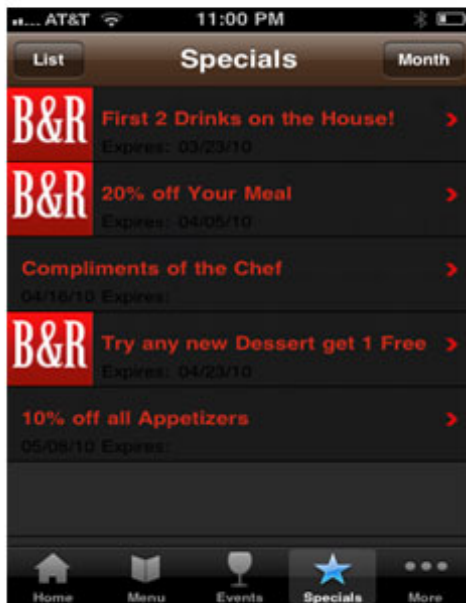

This is the base for your App. From here customers can navigate through the bottom tabs to explore your restaurant. The bottom tabs can be edited by the user for user custom navigation.

Menu

The menu can be customized to display any or all of your menus. Update this at any time through your admin web console so your customers will always have access to your latest menu!

Specials

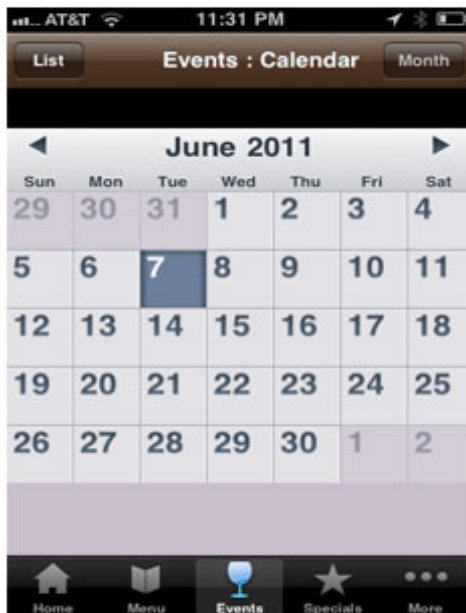

The specials tab will display any offers or announcements that you want to send to your customers. Your customers can easily share specials with friends, so word of your deals and offerings will spread quickly.

Locations

Users can view the location of your restaurant and receive directions from any place they are at.

Events

The events tab creates an Event Calendar on your App. Your customers will have access to all of your upcoming events, in list or calendar mode, and can see full details of the event.

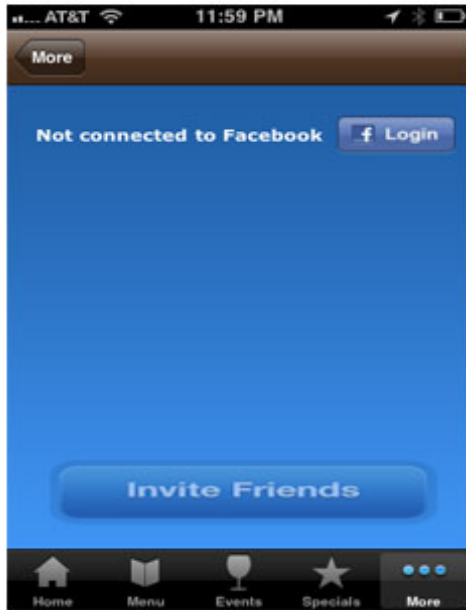

Mobile Control

From your web admin console (MCS - Mobile Control System), you can update menus, specials, events, create links to your social media sites, and send push notifications.

Orion GlobeCom's mobile team specializes in developing mobile apps across numerous industries. An example of our omnipresence spans across various platforms like Android application development, Symbian OS development, iPhone apps development and Blackberry application development.
